

## SCRS Digital Innovation Initiative

### Executive Summary

### Progress Meeting #1

SCRS's Digital Innovation Initiative (DII) progress meeting was held on February 11th, 2020 with over 30 attendees from sponsor, CRO, sites, and professional service providers. The SCRS leadership team welcomed the engaged contributors and emphasized the importance of this initiative to the industry.

With a robust agenda we kicked off the meeting by sharing the survey results completed by the DII members. Survey results from nearly 50 responses indicated the best path forward for the program would be to divide the group into two smaller working groups, covering decentralized clinical trials (DCTs) and ePRO/wearables.

Decentralized Clinical Trials (DCTs)

ePRO/Wearables

These two groups will focus on producing best practices to set up the industry – specifically the site community – for success, white papers that outline findings and recommendations, and tool kits that contain documents, logs, and usable assets. It was also deemed important to share this information as widely as possible through SCRS-related engagements and events, websites, and position papers. Additionally, the teams will seek regulatory agencies and the broader site prospective into their work.

### Next Steps:

The team will divide based on their preference into the aforementioned sub-groups. The work/results will be disseminated and distributed via several means including SCRS webinars, bi-monthly publications, presentations, and at SCRS Summits.

The next DII meeting will be held on April 21st, 2020. Sub-groups will meet separately during the month of March. A link to the recording can be found [here](#).
