

SCRS Digital Innovation Initiative

Workstream Update - September 2020

Both of our Digital Innovation Initiative workstreams – Decentralized Trials and Connected Devices – continue to make strides in their project work, centered around providing recommendations and best practices to sites and the rest of the industry for adopting these technologies. The teams have completed the terms and definitions appendix that will support the document and have moved their focus now to designing and completing the scope of work statement.

The statement will be the guiding introduction to the document and let our readers know what they can find in the document, as well as what they won't find. This statement will set-forth the goals, deliverables, constraints, and purpose of the bulk of the work – the recommendations. This meeting was spent summarizing the deliverables and purpose that had been previously worked on, and beginning specifically on the goals and constraints.

As the team continues to work independently on finalizing some of the details around the purpose and deliverables, we will meet next to continue to work on the goals and constraints. Once the teams have agreed upon scope and the final statement has been written the work will then shift towards the actual recommendations and deliverables that will bring the scope to life.

[The teams will meet in Mid-November to close out the year's work.](#)
