

SCRS Digital Innovation Initiative

Progress Meeting - November 2020

Momentum within the Digital Innovation Initiative continues to grow as the two workstreams work to develop their respective Recommendations and Best Practices publications. Updates were shared at this **November meeting** surrounding both the Decentralized Trials and Connected Devices group progress. Each team has completed their terms and definitions document that will serve as an appendix to the publication itself, lending a baseline understanding of the work contained in the bulk of the publication.

Progress was shared and discussed surrounding the scope of work statements that each team is developing independently. The members of the groups were able to learn about and share ideas around each other's respective scope elements as those start to take form into the actual statement. All of the elements have been discussed and finalized, now the statement itself will be produced and reviewed by the groups. These scope statements will focus specifically on the deliverables, goals, purpose, and constraints of the produced contents of the publication.

After the scope statements are completed, the workstreams will begin to complete the recommendations which will constitute the bulk of the work. Based on preliminary scope elements, these will be slightly different in content and delivery but will work to accomplish similar goals of enabling a deeper understanding, make the process of adoption easier, and alleviate confusion or unknowns in their respective areas.

The workstreams will meet later this month to continue this work, as well as mid-January 2021.

Each team has completed their terms and definitions document that will serve as an appendix to the publication itself, lending a baseline understanding of the work contained in the bulk of the publication.
