

## SCRS Digital Innovation Initiative

### Decentralized Trials Workstream Meeting Summary - April 2021

#### Previous Work Recap

The team began April's meeting with a brief recap and summarization of the work done to-date. Continued agreeance on project progress centers around the process flow for DCT's, following specific journeys along that flow for the patient, the site, and the data. This journey is rooted in protocol design as the starting point and will be represented through a subway-map type presentation. Supplemental text will expand on the journey's key junctures. Important points were brought up specifically about including considerations around licensing requirements, drug supply chain lawn, and patient safety.

#### Site Challenges

The team discussed and came to agreeance on a Site Challenges Sub-Project to assess and assure we are addressing the needs of the research sites directly. Through Survey and conversation, a deeper assessment and write-up will supplement and enforce the work being done by this team. This project will begin with a survey that will be crafted in short order. This will be distributed, and the data stratified based on experience and other various demographic factors. They survey should be based on the components of DCT's so sites can express their points in alignment with our plan of work. Also considering the three journeys will help make the analysis of this data easier.

[Between now and the next meeting, tentatively scheduled for June 9th, 2021 the survey will be created and drafts circulated to the team for feedback. Next meeting will see a deeper dive into the survey prior to distribution.](#)
