

SCRS Global Oncology

Oncology Education Meeting Summary

August 2021

The education team focused deeper into the **phase 1 project** – a publication designed to help sites start or advance their phase 1 clinical trial units. Most of this meeting was focused on refining the scope of work statement. At this point, the scope of work is nearly complete. Teammates were encouraged to review one additional time for final comments. A final draft would be presented at the next meeting.

Next the team will focus more into the four categories and the deliverables within them. Teams will focus into **personnel, start-up and feasibility, logistics and infrastructure, and regulatory**. Each member of the group is encouraged to provide their preference on group. At subsequent meetings, these groups will make progress discussing and developing the content under each heading.

[Prior to the next meeting, members are asked to review the scope of work statement as we finalize it, as well as send along their preference for group work.](#)
