SCRS Digital Innovation Initiative
Decentralized Trials Workstream Meeting Summary - May 2022

The team spend this month's meeting enhancing and reviewing wholistically the entire journey map now that it was placed together. Several minor enhancements were made to assure a complete and valuable journey, such as feasibility considerations, auditing, and patient/site choice elements.

The chart can be found on the SCRS website for review as a living document. Next, the team will begin to build out each of the individual elements by dividing them up amongst the teammates to add context into. The team will then review each-other's work to add to each element/stop and enhance further.

The team will come back together in late July/Early August, as the meeting time in June will be spent developing out the items vs. meeting.
