SCRS Digital Innovation Initiative
Connected Devices Workstream Meeting Summary - July 2022

During our July Meeting, the Connected Devices team came together to more specifically discuss the "during trial" activities. This would be in supplement to the start-up and closeout or post visit activities. Some key points brough up during this discussion include:

1. Logistical challenges with devices, movement, intake, and data collection

2. Data access – what do you and don't you have access to. What is the data flow?

3. Keeping patients on schedule, assuring they are progressing, and the devices are working for them

4. Accessing demo kits and dummy devices to utilize as part of training and learning

5. Ongoing support – for both the patients and the sites

While many other details were laid out during these discussions, the above are the key points that summarize the learnings.

Subsequent meetings will see this group finalizing these details that come up during the trial, through the form of the text for the document itself.
